PROJECTS

Portfolio Website – abdullahalhadbani.me

A personal portfolio website built with Astro and Tailwind CSS to showcase projects and skills. Features multilingual support (Arabic & English) and SEO optimization.

- Developed a fully responsive design for desktop and mobile.
- Implemented multilingual support and optimized for search engines.
- Configured GitHub–Netlify integration to enable automated deployments upon each code push.

PulseGuard – Smart Health Monitoring Application (Graduation Project)

A health monitoring web application to track heart rate, steps, and other metrics, with emergency contact alerts and personalized dashboards.

- Designed and implemented the health dashboard interface.
- Integrated Firebase for secure data storage and alert triggers.
- Managed development process using Scrum methodology with Trello and Monday.com.

Eqraa – Online Book Discovery and Reading Application

A web application for discovering, filtering, and reading books using the Google Books API.

- Implemented advanced search and filtering capabilities.
- Added user authentication and personalized library features.
- Led Agile ceremonies, including sprint planning and retrospectives.
